Double Gracey

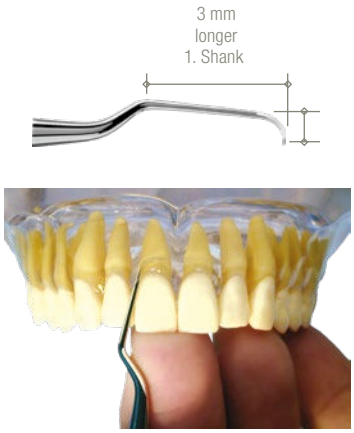

Instrument Information

Gracey Tip Comparison

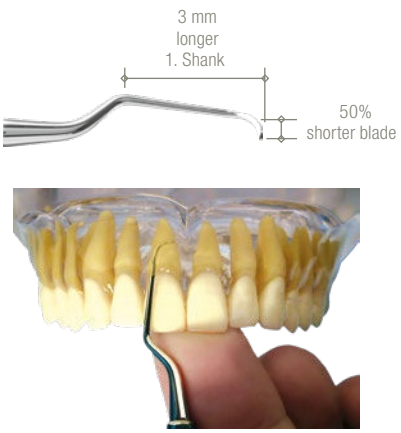

GRACEY CURETTES

Gracey curettes are designed for specific areas of the tooth, removal of subgingival calculus and root planing. The angle of the blade allows easy insertion into the sulcus and minimises tissue trauma.

GRACEY DEEP POCKET CURETTES

With a 3 mm longer shank, this instrument can be used for cleaning and root planing in pockets of 5 mm or deeper.

GRACEY ACCESS CURETTES

With a 50% shorter blade and a 3 mm longer shank, the entire blade of this instrument rests against the root surface. Even tight pockets and furcations are incredibly easy to reach.

- Innovative and ergonomic closing latch
- New design for a better cleaning process
- Innovative color coding and modular silicone holders

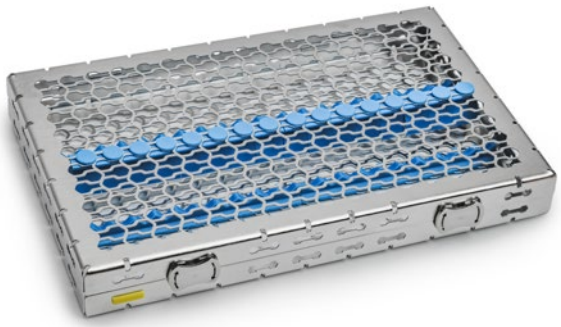

GALAXIE Cassettes 8

Instrument Cassettes

GALAXIE Cassettes

The gold-standard solution for instrument reprocessing.

A new range of cassettes - ergonomic and smart - offers an optimal solution for the classification, cleaning and sterilization of dental hand-instruments, while increasing safety and efficiency in the practice.

Din Cassette for 20 Instruments
PP40373-3

1/2 Din Cassette for 10 Instruments
PP40372-2

1/4 Din Cassette for 5 Instruments
PP40371-2

High Quality Materials:
» Electropolished stainless steel makes the cassette edges smooth and protects against corrosion.
» Only food grade silicone used.

Innovative and ergonomic closing latch:
» Safe and easy-to-use locking system, allows one-handed opening.

New design for a better cleaning process:
» The new and innovative laser cutting pattern guarantees maximum efficiency during the cleaning and sterilization process whilst ensuring stability and strength of the cassette.
» Open lattice design specially designed for washer disinfector use, enabling maximum water through flow.
» Smooth round corners and slotted edges increase drainage and reduce drying time.

Innovative color coding and modular silicone holders:
» The innovative shape reduces instrument contact allowing for more liquid flow and for more efficient cleaning.
» 5 color coding tabs for practice organization included with every cassette.
» Silicone rails can be assembled in any position, are compatible with all handle diameters.

Part Code	Description
PP400371-2	Cassette for 5 instruments, ¼ DIN, blue rails, incl. 5 color coding option (purple, red, yellow, green, orange, black), 185x80x37mm
PP400372-2	Cassette for 10 instruments, ½ DIN, blue rails, incl. 5 color coding option (purple, red, yellow, green, orange, black), 185x148x37mm
PP400373-3	Cassette for 20 instruments, Full DIN, blue rails, incl. 5 color coding option (purple, red, yellow, green, orange, black), 285x183x37mm

Cassettes will be delivered without instruments.

HI-LITE PROBE MAINTENANCE

Avoid ultrasonic cleaning: the Hi-Lite markings come off under ultrasound! We recommend gentle cleaning of the probe with a mild detergent. Do not sterilise above 150°C as the Hi-Lite markings may discolour.

INSTRUMENTS®

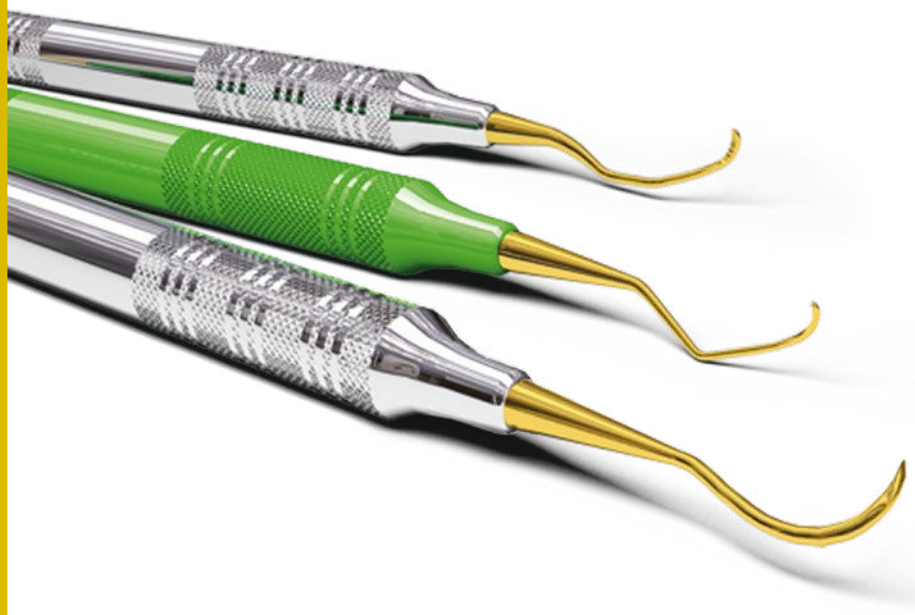

XP TECHNOLOGY™

Your benefits

- No more sharpening!
- Thinner working ends
- Sharper edges
- Fast, easier treatments
- More comfort, less fatigue

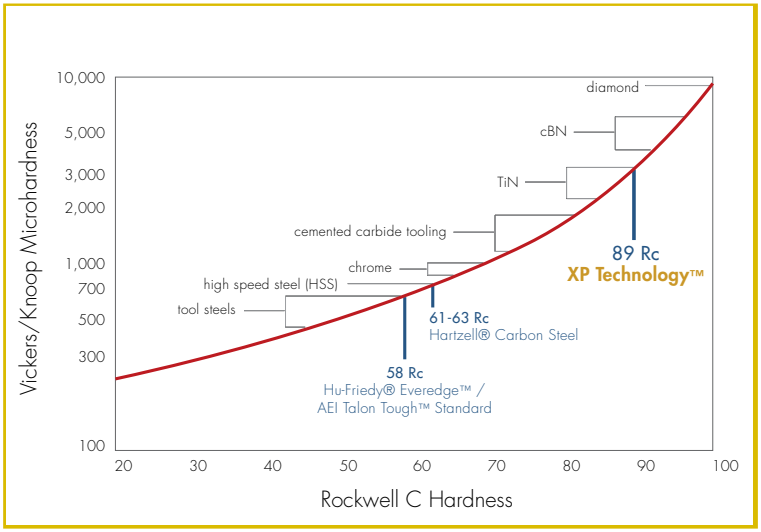

What is XP Technology 16
XP Pro Thin Instruments 17
XP Double Gracey 20
XP Gracey Curettes, Universal Curettes, Scalers, Kits 23

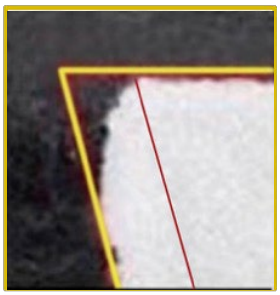

What is XP technology?

NO MORE SHARPENING

XP Technology is a patented technique for surface treatment. By using nano-optimised technology, the instruments become significantly more durable. The process also makes it possible to produce thinner instrument tips with sharper blades.
Time-consuming sharpening of instruments is thereby eliminated.

In order to get the original edge, you would have to sharpen the instrument along the RED line.

1.500 Strokes

15.000 Strokes

Research: University of Toronto, Dr Phillip A. Watson, Dept. of Biological and Diagnostic Sciences

Hardness: 89 Rc

In XP Technology, a super-hard alloy is applied to a stainless steel base. The surface becomes much more durable and wear-resistant. Conventional instruments are made of stainless steel or carbon and reach a hardness level of 58 to 63 on the Rockwell scale. With XP Technology, a hardness of 89 Rc is achieved!
XP Instruments last much longer!

Result: Higher wear resistance

Independent research has classified XP Technology as a revolutionary technological advancement in the dental industry. Dr Phillip Watson of the University of Toronto demonstrated the superior longevity of XP instruments in comparison with standard instruments.

XP PRO THIN™

Your benefits

- Extremely thin working ends, excellent access into deep pockets
- Ergonomic, light handles
- More comfort, less fatigue
- With XP Technology – no more sharpening!

Pro Thin Instruments

What makes Pro Thins the perfect periodontal instruments?

Delicate working ends | Precise design | XP® Technology – no sharpening | Ergonomic handles | Best tactile sensation

Pro Thin Instruments have been designed for special challenges in periodontal treatment – from deep pockets to tight interproximal areas. The precisely designed working ends and ergonomically gentle periodontal therapy. Using ProThins contributes significantly to the success of the treatment and to the maintenance of periodontal health.

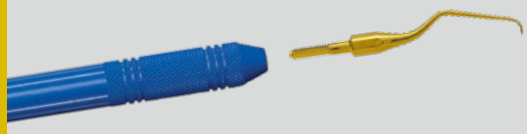

XP Pro Thin Instruments

QUIK-TIPS

Pro Thin instruments with significantly thinner tips are also available as screw-in Quik-Tips. The handles can be reused if working ends are replaced.

Furthermore, instrument tips can be combined as desired – the colour of the handle can be selected on an individual basis according to your needs.

As with the Pro Thin complete instruments, Pro Thin Quik- Tips do not need to be sharpened thanks to the patented XP Technology. The instrument therefore always retains its shape.

Double Gracey Application

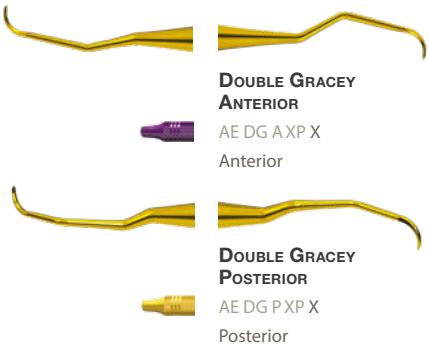

Surfaces and Application of Double Gracey™ Curettes

Application of the **Double Gracey Standard** Curettes. Both instruments replace a full set of Standard Gracey Curettes.

We recommend the Standard set for the removal of sub-gingival deposits and root planning.

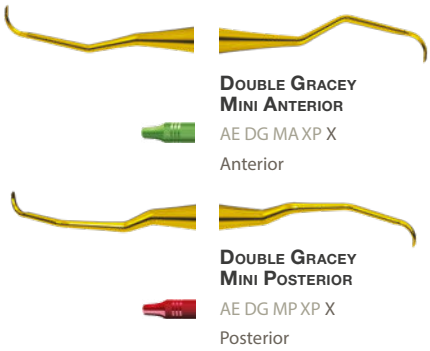

Application of the **Double Gracey™ Mini** – for easier access to deep and narrow pockets and furcations.

Both instruments replace a full set of Mini Gracey Curettes. The working ends have a 50% shorter blade and a 3mm longer terminal shank as the Standard Double Gracey Curettes.

Gracey Application

USAGE AND APPLICATION
GRACEY CURETTES

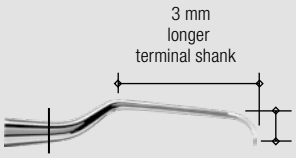

GRACEY CURETTES

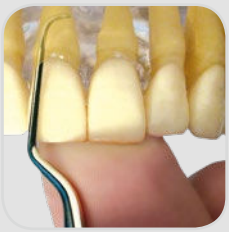

Gracey curettes are designed for the removal of subgingival calculus and root planing in specific areas of the tooth. The angle of the blade allows for easy insertion into the sulcus and minimises tissue trauma.

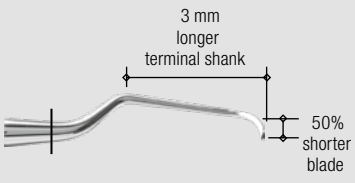

GRACEY DEEP POCKET

The terminal shank of this instrument is 3 mm longer, which allows for cleaning and root planning in pockets that are 5 mm deep or deeper.

GRACEY ACCESS

With a blade that is 50 % shorter and a shank that is 3 mm longer, the entire blade of this instrument has contact with the root surface. Even tight pockets and furcations become easily accessible.

BOGE 513™

Boge 513™ is the perfect instrument for supragingival debridement in the anterior region of the lower jaw. The hoe tip has an elongated shank and an even, slightly curved, sharp cutting edge. The optimal width enables stable positioning of the cutting edge on lingual or facial tooth surfaces. The fine Nebraska 128 tip is sickle-shaped and ideal for interproximal contact areas as well as teeth with crowding and/or recessions.

EFFICIENCY

The thin, counter-angled sickle scaler tip of the Eagle Claw instrument is ideal for posterior, supragingival and interproximal areas. Eagle Talon™ complements the Claw scaler with the combination of the two anterior tips - J3 (Jaquette) and N128. This sharp, sickle-shaped scaler is ideal for removing tartar and plaque in the anterior region.

XP Quick-Tip Instruments

QUIK-TIP FIXINGS

With Quik-Tips, a single working end can be replaced without replacing the entire instrument. This leads to significant cost savings. Additionally, XP Quik-Tips do not need to be sharpened.

ACCESS

With the 3 mm longer terminal shank, these instruments can be used for cleaning and root planing in pockets deeper than 5 mm. The short blade of our +3 Access instrument also allows much better access into subgingival pockets.

Sharpening Material

Sharpening (Do not sharpen XP instruments!)

Simply Sharp Ceramic Stone
8,9 x 2,5cm
AE SA CC/F

Simply Sharp KIT
AE SA CC/FK

ALL YOUR SHARPENING NEEDS IN ONE EASY KIT

Sharpening is usually inconvenient, tedious and challenging. However, it is important to maintain sharp edges on your curettes and scalers. The Simply Sharp Stone Kit is designed with your special requirements in mind. The double-sided stone offers you the choice of an extra-fine surface on one side and coarse grit on the other. The kit also includes a powerful 10x magnifier for examining your edges. A sharpening test stick is also included.

Diamond Stone
10,1 X 2,5cm
AE SA DS

Test Sticks
AE SA STS (Single Pack)
AE SA STP (Pack of 6)

Norton Sharpening Stone Oil
4.5 oz. (133ml)
AE SA NO412

Simply Sharp Magnifier
AE SA MEL

SHARPENING TECHNIQUE

1. Using the 10x magnifier, inspect the instrument blade.
2. Sharpen your instrument as usual, then test sharpness using the test stick.
3. Use the magnifier to inspect the angle, edge contour, and edge sharpness. A sharp edge does not reflect light.
4. Repeat steps 2 and 3 until the desired edge profile is achieved.
5. Check your instruments regularly to maintain sharpness.

METHOD 1

Move the sharpening stone while holding the instrument in place. The edge is visible while the stone is moved at the correct angle, producing a sharp edge.

METHOD 2

Move the instrument while holding the sharpening stone in place. This method creates less fatigue. However, maintaining the correct instrument angle may be more difficult, due to the inability to see the edge while moving the instrument.

COMPOSITE

Your benefits

DR. COLONNA EXCLUSIV-INSTRUMENTS

The instruments in the Dr. Colonna series have been specially developed for use in micro-preparations. Microspoon excavators are very precise and are particularly suitable for removal of caries in the smallest micro-dental preparations.

DR. BELVERDE EXCLUSIVE HANDLES

The instruments in the Dr. Belvedere series have serrated, oval heads to enable better transport and good adaptation of the composite.
The lightweight handle which is flattened in an area makes handling easier when applying composite material. The instrument is wellbalanced in the user's hand.

DR. BLACK'S FORMULA

Dr. Black's formula is based on the concept of instrument symmetry. This is achieved by keeping the blade of the instrument within 2 mm of the longitudinal axis of the handle. Proper symmetry is necessary to achieve optimal cutting with minimal effort.

Some instruments, such as margin trimmers, are constructed with a cutting edge at an angle other than a right angle.
In these cases, a fourth number is integrated into the formula, which indicates the degree of angle of the cutting edge to the longitudinal axis of the handle.

MULTIFUNCTIONAL

The excavators, which are used to remove carious dentine, have two different working ends: a spoon-shaped end, especially useful in deep, carious areas, and a round end for toothconserving cavity preparations.

UNIVERSAL

The super pluggers feature two different-sized condenser/pluggers with a ball-shaped burnisher on one end and an acorn-shaped carver on the other end. This provides you with a multifunctional instrument.

RESISTANT

American Eagle's burnishers are suitable for precisely polishing amalgam. Our burnishers are made from high-quality stainless steel, offering superb durability and corrosion resistance.
